

RICERCA & SVILUPPO + ACTIVA

"Inventing the future" tells the concept. The pre-scenario is made up of a series of partial visions referred by our team which was able to pass through...

"Who was the man of future now is man of present" developing ergonomics by never-ending studies from relation and proportion to instrument and individual, in order to analyse the design for working place - from environment to energy and the new technologies. The scenario emphasizes the ergonomic components, new meanings which will produce comfort for the mind and the body.

The relation between individuals and technologies is going to grow up, the computers will become minimal, versatile and flexible until be a wearable tailored equipment.

Trends will give us the transition from concept to design, the anonymous environment par excellence into a changeable landscape, made up by new rhythms, typologies and roles which generated the need for a flexibility of image of work and request a new type of comfort "dressing furniture" which is more sensorial and psychological. Emmegi leads this answer with his wide product range.
